(12) **United States Patent**  
**Pertsov et al.**

(10) **Patent No.:** **US 9,636,424 B2**  
(b4) **Date of Patent:** **May 2, 2017**

(54) **COMPOSITION, METHOD, SYSTEM AND KIT FOR OPTICAL ELECTROPHYSIOLOGY**

(71) Applicants: **The Research Foundation of State University of New York**, Albany, NY (US); **The University of Connecticut**, Farmington, CT (US)

(72) Inventors: **Arkady M. Pertsov**, Manlius, NY (US); **Arvydas Matiukas**, Syracuse, NY (US); **Leslie M. Loew**, West Hartford, CT (US); **Joseph P. Wuskell**, West Hartford, CT (US)

(73) Assignees: **The Research Foundation of State University of New York**, Albany, NY (US); **University of Connecticut**, Farmington, CT (US)

(\*) Notice: Subject to any disclaimer, the term of this patent is extended or adjusted under 35 U.S.C. 154(b) by 0 days.

**ABSTRACT**

The present invention provides a method of optical electrophysiological probing, including: providing a fluorescing chemical probe; contacting a thick portion of tissue with the fluorescing chemical probe to create a thick portion of treated tissue; applying a first range of wavelengths of electromagnetic radiation to the treated portion of tissue; and detecting a plurality of depth-specific emission wavelengths emitted from the thick portion of treated tissue.
